Greenstone Carbon wins contract with Ambius

Greenstone Carbon wins contract with Ambius

An international company specialising in “interior landscaping”, Ambius, has chosen Greenstone Carbon to provide it with a carbon emissions reporting tool. Owned by Rentokil, Ambius will use Greenstone Carbon's Acco2unt software to monitor, manage and report on its emissions on a global basis. Each Ambius office will be able to track its emissions on a month-by-month basis, and the company intends to use the data collected to set specific targets for different business activities and/or regions. Ambius provides plants, artwork and “scenting” for commercial buildings.
