

## Back to business checklist

To prepare for a safe return to the workplace, we've prepared the following questions and insights as a guide for businesses.

### Is your building clean?

Viruses, bacteria, and other pathogens pose a constant, invisible threat. Go beyond clean with disinfection services to improve the surface hygiene of your premises.

### Are your people protected?

Studies show that up to 80% of common infections can be spread through contaminated hands. Hand sanitizer services help reduce that spread while simultaneously promoting positive behaviors.

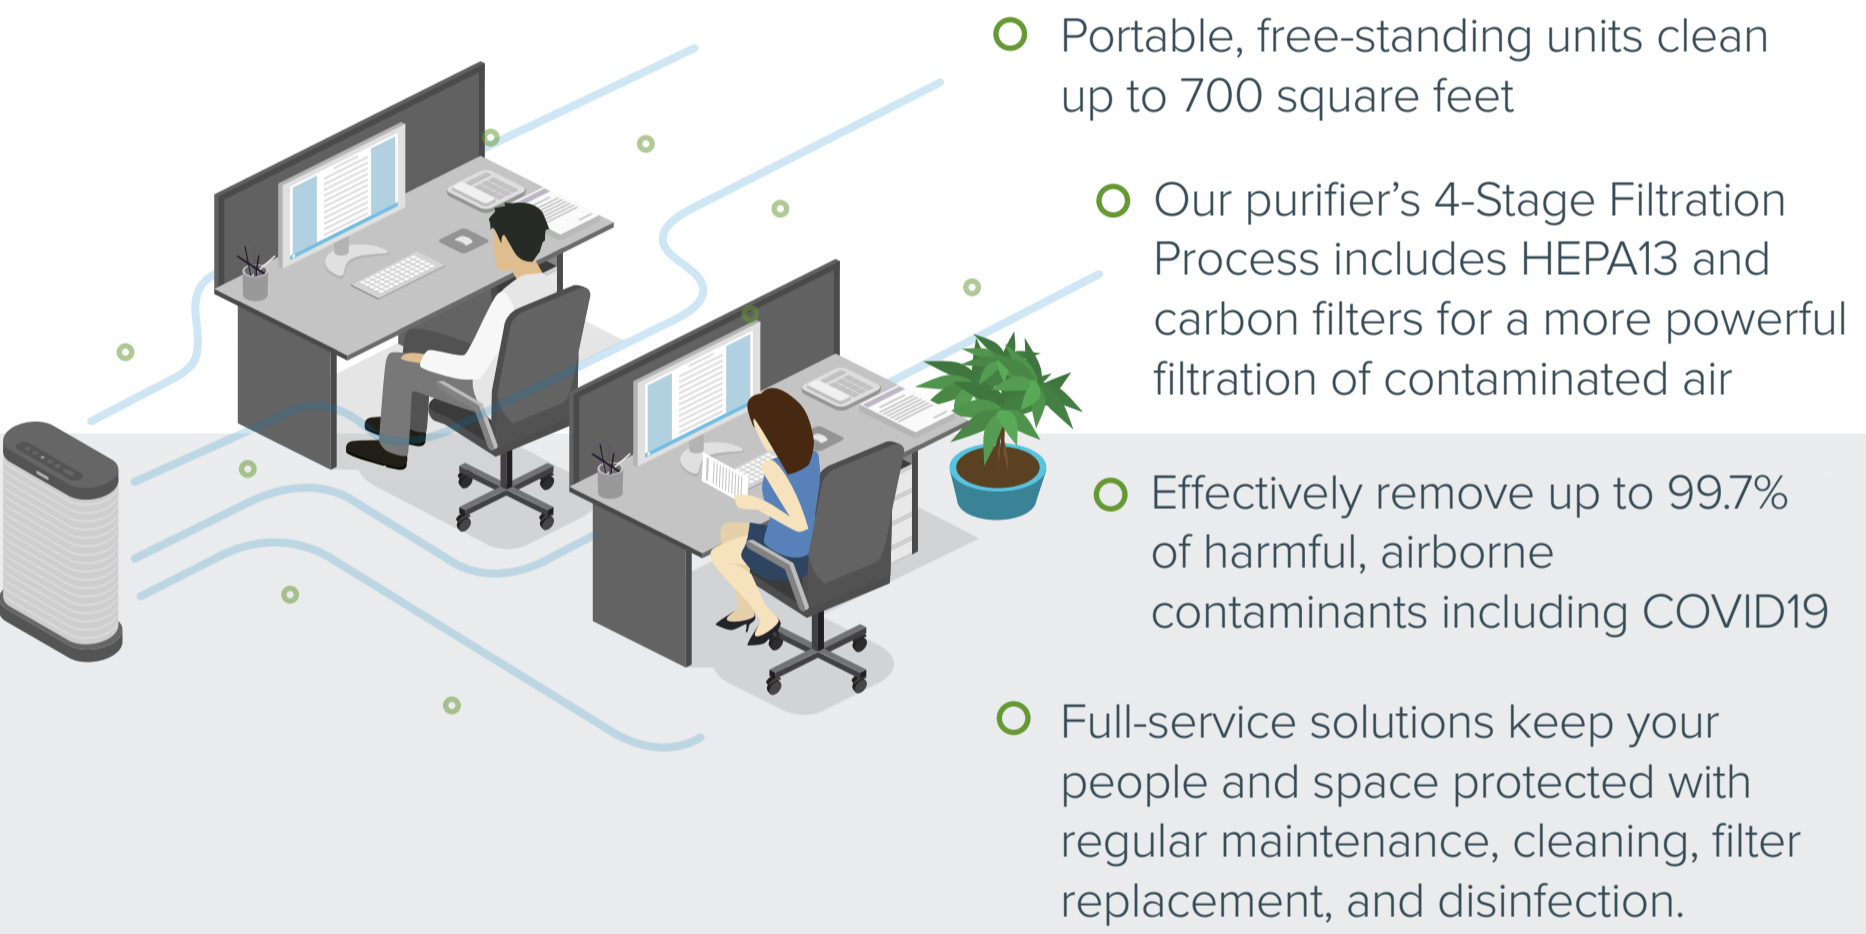

- Modular, mobile sanitizer stands design an intuitive user experience that encourages hand hygiene
- Sensor-operated units reduce product waste and deliver up to 2,000 uses per cartridge
- Our safe, gentle, dye-free foam sanitizer kills up to 99.99% of germs, viruses, and harmful bacteria
- Full-service solutions include monitoring, maintaining, cleaning and refilling units

### How is your indoor air quality?

Indoor air can be up to five times more polluted than outdoor air. With people spending 90% of time indoors, we can be exposed to a range of contaminants, microbes, allergens, and pollutants. Take a deep breath – air purification services can help.

### Do you have a protocol check in place?

You devote time to develop best in class protocols for your business. It's important to verify that your standards are being followed and people are acting on the visual cues that build trust with employees and customers.

- Verify that your hygiene and COVID-19 protocols are in place and being consistently followed
- We conduct a detailed, on-site assessment at each location
- Review wellness policies, social distancing, touchpoints, and more
- Ensure you are in compliance with local public health guidance

### Are you keeping your distance?

COVID-19 spreads mainly among people who are in close contact (within about 6 feet) for a prolonged period. It's important to design your space to help people maintain social distancing.

- Create green wayfinding or directional pathways with plant barriers
- When incorporating plexiglass, create borders with plants to reduce tension
- Modular green wall dividers and moss wall partitions allow for fast, functional, and beautiful space redesigns
- Introduce staggered work times where possible

### What next?

Meet with an Ambius Expert for a complimentary consultation. Our experts worldwide are consistently leading the way in designing healthier spaces and safer environments.
